

AXOR-C Cabs

4x2 and 6x2 Tractors
8x4 Tipper
12 Litre Engines

Design and Construction

The Axor cab is purpose designed for distribution and logistics applications. It offers an extremely comfortable working environment normally only associated with larger long distance trucks. The controls are simple to operate and logically positioned.

All cabs are constructed of steel and precision welded by robots. Critical areas are galvanised and box sections are filled with wax. This gives excellent protection against corrosion and offers high standards of occupant safety. (Complies with ECE R29).

Cabs tilt to 67° to enable service access.

Comfort

Axor cabs all feature extensive heat and sound insulation, the cab is suspended on front and rear spring struts with dampers (rough terrain cab suspension fitted on Construction Day Cab) making life on board as relaxing as possible.

Sleeper cabs feature a single piece lower bed with an internally sprung mattress measuring 2040 x 645mm. The optional upper bed is similarly constructed and offers even more generous dimensions - 2000 x 700mm. The upper bed is available with high roof sleeper versions.

The driver's air suspension seat is fully adjustable and includes integral 3 point inertia reel seat belt and adjustable head restraint. The fixed passenger seat is also fully adjustable with 3 point seat belt and adjustable head restraint.

All of the materials used in the Axor cab have been specially selected to deliver a high quality look and feel throughout the vehicle's life.

Interior Lighting

Large lamps provide interior lighting with manual and door switches. A map reading light and a reading light for the bunk area are also provided with sleeper cabs. High roof sleepers are also fitted with night time green lamps.

Storage

Axor provides generous storage facilities for all manner of drivers kit, offering practical and accessible places for large and small items alike plus a clothes rail as standard in day and extended day cabs.

For smaller items; both doors feature deep pockets with bottle holders, above the windscreen are shelves for documents or maps, the facia features multiple recesses for handy items and integrated cup holders and on top of the dash a large flat area that has many uses.

Sleeper cabs include two large compartments under the bed. An external locker is also provided for dirty kit or tools.

Day cabs have deep storage to the rear wall.

Access

Getting in and out of the Axor is a simple affair. The three non-slip steps are arranged in staircase fashion, the grab handles are positioned naturally and the doors open to a full 90°.

The steps on Construction day cabs are hinged to minimise the risk of damage.

Instruments

The new wrap-around dashboard offers each control to the driver exactly where he expects to find it. A quick glance at the anti-glare driver display gives all the information needed for safe driving. Detailed driver information can be obtained by scrolling through the different pages using the multi-directional button on the dash. A two man digital tachograph (Siemens VDO as standard) is located above the windscreen with a conventional speedometer and rev counter on the dash. Tractor cabs are finished with wood effect trim and soft feel materials giving an air of quality.

Protection & Finish

Axor cabs are painted Arctic White as standard, they can be ordered in a range of solid or metallic colours.

Chassis and components are finished in Nova Grey whilst the wheels are painted silver.

Service Access

Access through front service panel for:

- Engine oil top-up
- Coolant water top-up
- Clutch fluid reservoir

Access from open passenger door for:

- Windscreen washer reservoir
